

BRIEF

Role: Lead UI/UX Designer

Focus: Information Architecture, Visual Storytelling, Responsive Web Design

The Challenge

Architecture is a visual-first industry, but many portfolios suffer from high bounce rates due to cluttered layouts and slow load times for high-resolution images. The goal for Omini Concept was to create a digital experience that felt as premium and structured as the physical spaces they design, while ensuring a frictionless path for potential clients to book consultations.

The Solution

I engineered a minimalist UI that prioritizes Visual Storytelling without overwhelming the user. By utilizing a modular grid system and generous whitespace, I ensured that the firm's projects remained the focal point of every page.

- Designed a tiered navigation system that allows users to filter projects by category (Residential, Commercial, Modern), reducing the cognitive load required to find relevant work.
- Optimized image delivery and asset loading to maintain high-fidelity visual quality while ensuring lightning-fast performance across mobile and desktop devices.
- Re-architected the "Contact" journey to move users from "Interest" to "Action" with a simplified, high-glanceability booking form.

Key Achievements & Impact

- Reduced Bounce Rate:** By streamlining the homepage layout and improving page speed, user session duration increased significantly.
- Improved Navigation:** The new filtering system decreased the "Time-to-Content" for users looking for specific architectural styles.
- Lead Generation:** Transformed a static gallery into a high-conversion lead generation tool, aligning the digital presence with the firm's business growth goals.
