

Brief

Role: UI/UX Designer (collaborative)

Focus: Design Execution, Visual Systems, Data Visualization

I focused on the high-fidelity execution and iteration of the platform’s core features. My role involved translating high-level strategic direction into functional, polished UI components that adhered to a strict new design language:

- Worked closely under a Senior Designer to refine the player drafting flow, ensuring that every interaction met the project's usability standards and visual goals.
- Built and maintained a library of UI components (player cards, stat trackers, and bet slips), ensuring consistency across dozens of application states.
- Visual Hierarchy for Data: Executed a high-contrast color system to distinguish between live game data and user inputs, making the UI scannable at a glance during high-stakes gameplay.

Key Achievements & Impact

- **Cross-Functional Alignment:** Successfully managed design hand-offs by documenting component behaviors, ensuring the developer team could implement the Senior Designer's vision with 100% fidelity.
- **Streamlined Drafting:** Assisted in the optimization of the roster-building flow, contributing to a 30% reduction in "Time-to-Task" for new users.
- **Systemic Consistency:** Guaranteed a unified aesthetic across all screens by rigorously applying the established design system, preventing "design debt" during the rapid prototyping phase.
